- Windows 365
- Azure Virtual Desktop
- Microsoft Intune

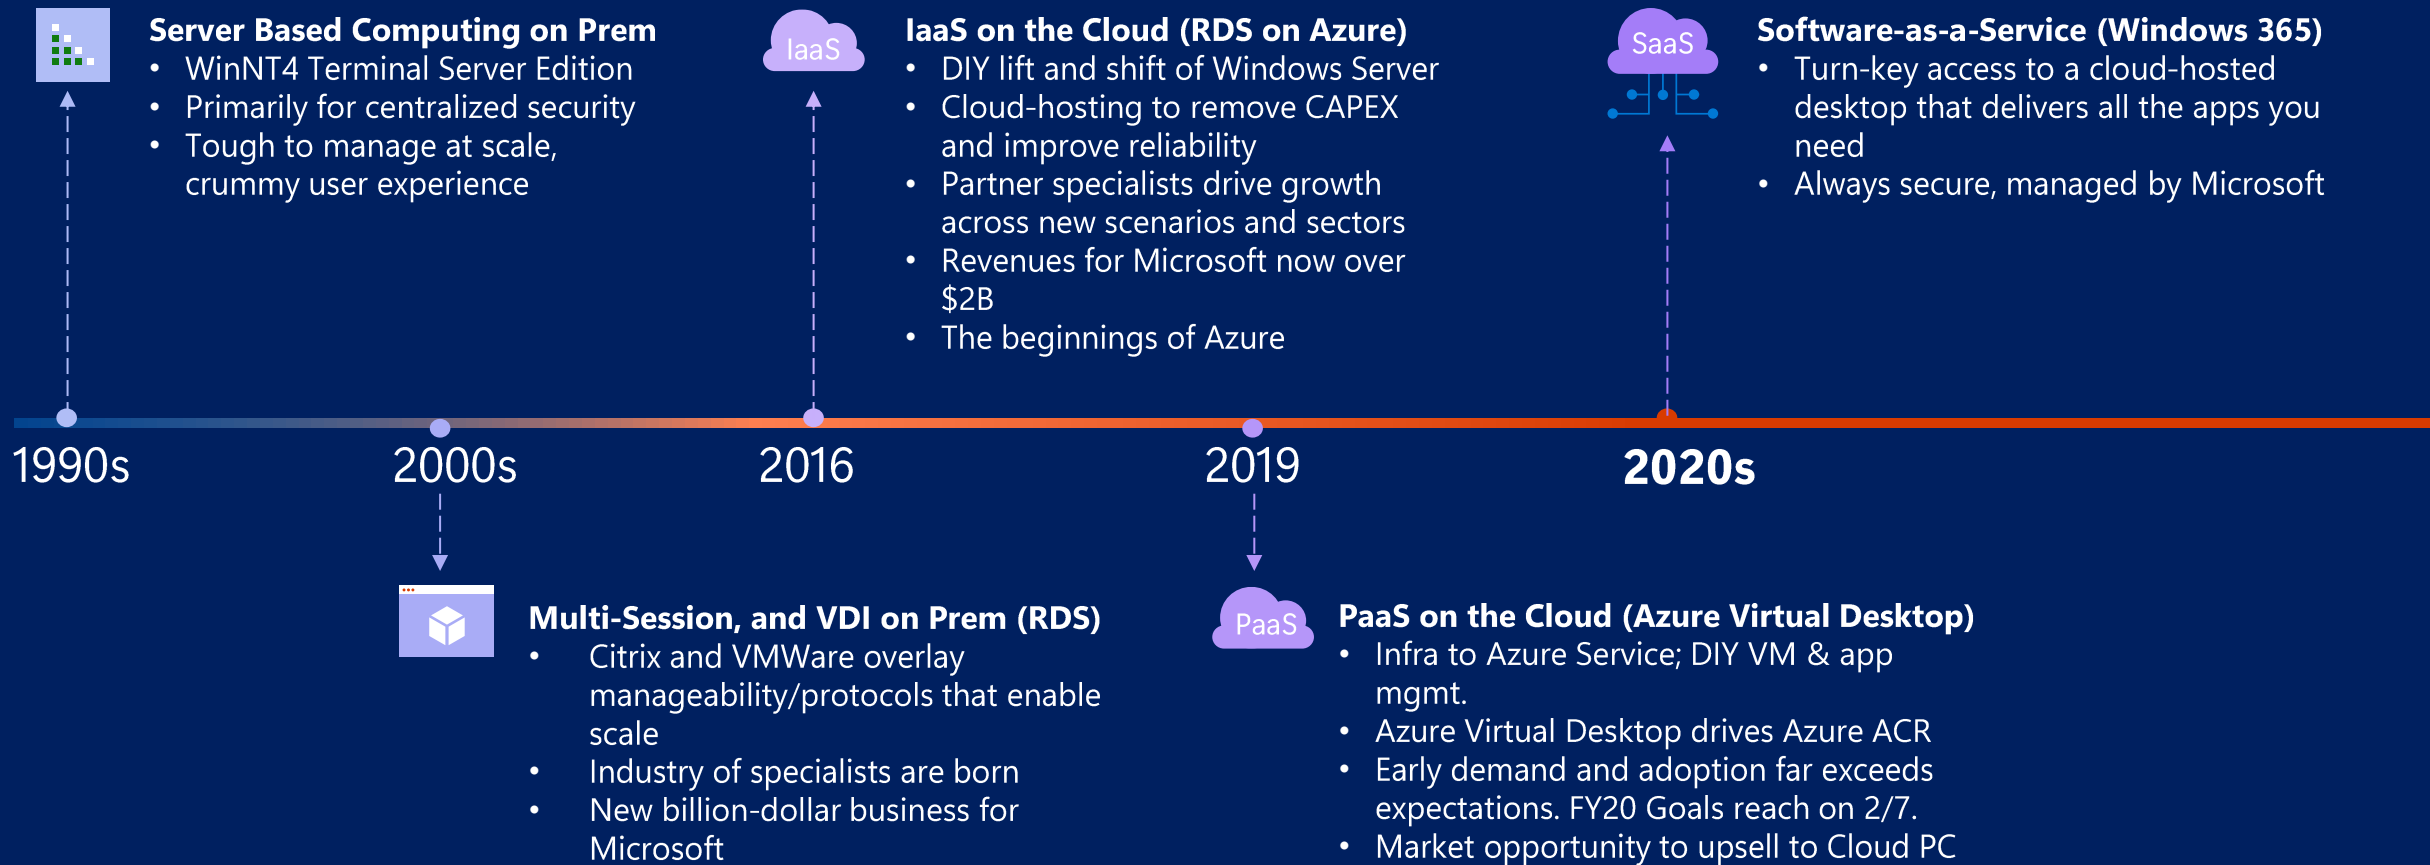

# What is a Cloud PC?

- A full featured Windows workstation which is running in Azure datacenter
- Managed the same way as you manage your current devices
- Brings benefits of datacenter technology to traditional workstations

# History of Microsoft desktop virtualization

# Where are we going?

## Horizon 1

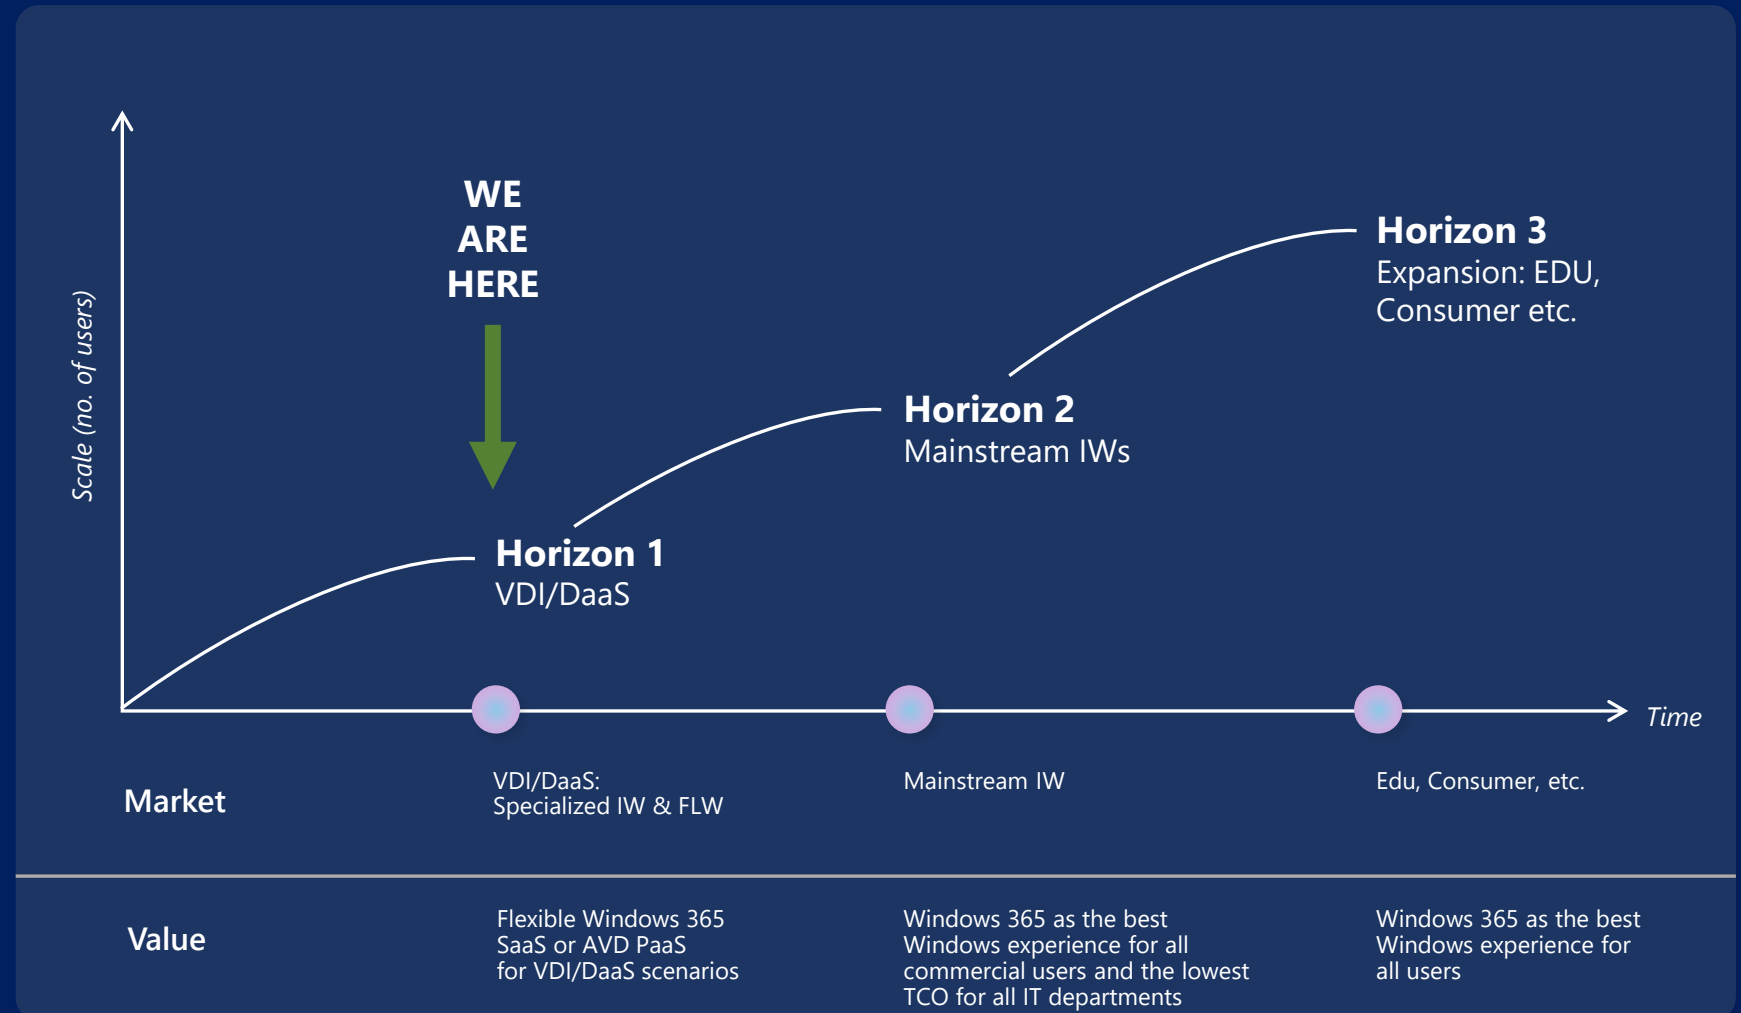

Continue to innovate VDI/DaaS market with Windows 365 and AVD to replace legacy solutions

## Horizon 2

Develop mainstream Information Worker user profile with evolved Windows 365 service to deliver an exceptional user experience + simplicity + lowest TCO for IT

## Horizon 3

Expand to additional segments, including Consumer, after Information Worker

Azure Virtual Desktop

# Introducing Windows 365 for Agents

## Windows 365 for Agents

### **Agentic work with computer-using agents (CUA)**

Powers large-scale, human-like workflows through CUA.

### **Fueling Microsoft's AI agents**

Backbone for Microsoft Copilot Studio, Microsoft 365 Copilot Researcher and Opal.

### **Enterprise-grade security and readiness**

Built-in identity, compliance, and security controls.

### **Scalability with consumptive pricing**

Run with scalability and a flexible pay-as-you-go pricing model.

### **Flexible OS environment**

Support Windows, Linux, and browser-based environments.

# What would you like to build?

Agent

Workflow

What business need will your agent solve with research, conversation, and actions?

## Start building from scratch

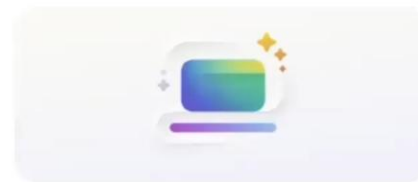

### Create workflow

Powerful automations speed up your processes with ease and security in mind

### Create agentic automations

Build an agent that automatically handles tasks for you and your team

### Create computer-using agent

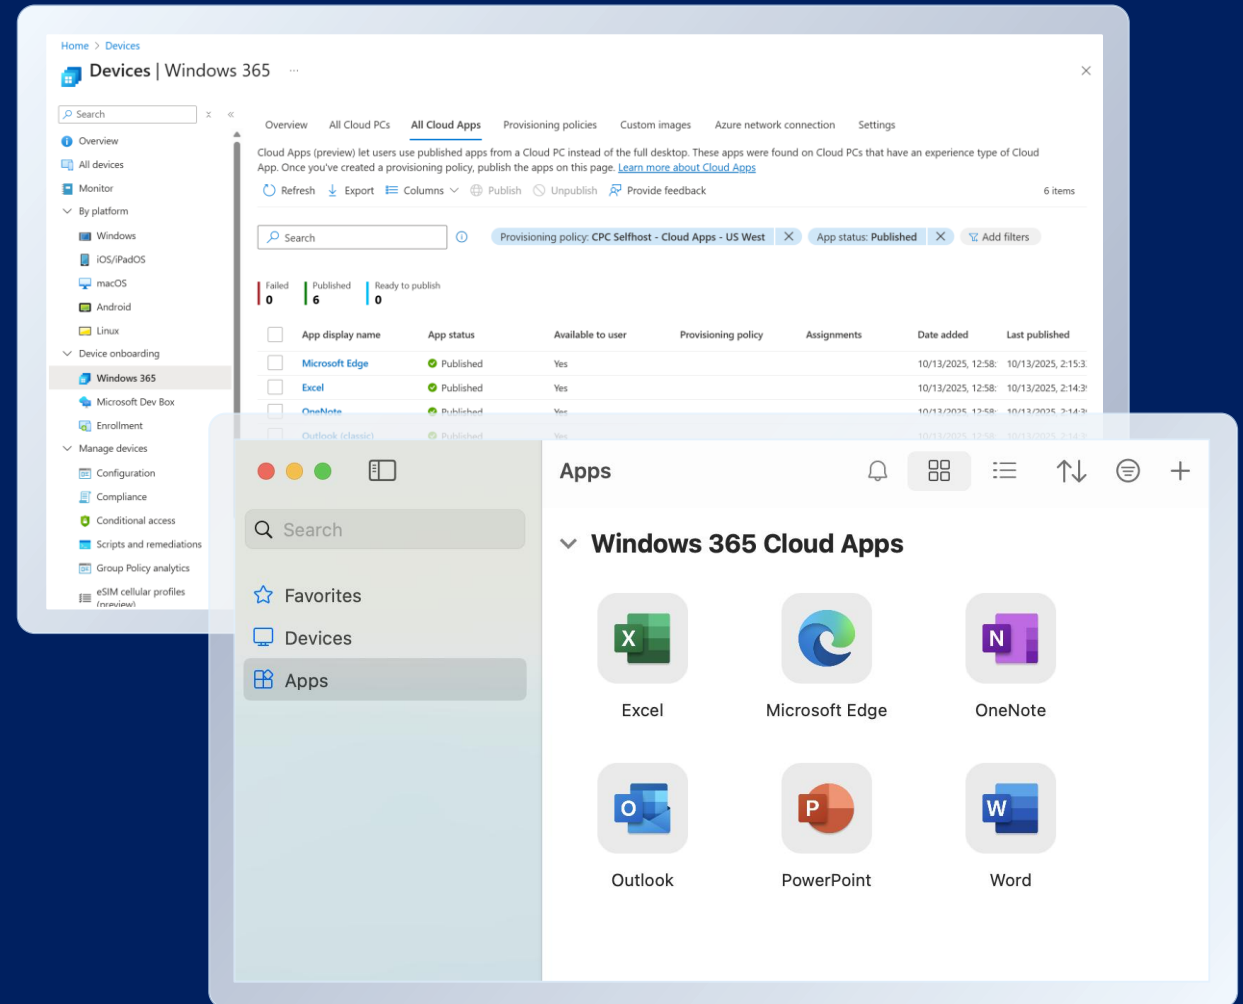

Let agents accomplish even more across apps and websites

## Recent agents

# Windows 365 Cloud Apps

- Windows 365 Cloud Apps give users access to specific apps, instead of a full Cloud PC:
- Cloud Apps are supported in Windows 365 Frontline shared mode.
- Provisioning policies will support full desktop or app-streaming experiences.
- Manage Cloud Apps in Microsoft Intune, adhering to Windows 365 SaaS principles.

# Windows 365 User Experience Sync

- Brings profile management feature into Windows 365 Frontline Shared machines
- "Fslogix as a service"
- Easy one-click enablement via provisioning policy without hassling with file shares, permissions, agents, policies etc.
- No need for hybrid join or legacy on-prem stuff

# Introducing Windows 365 AI-enabled Cloud PCs

## Seamless AI access anywhere

Experience high-performance Windows AI on any device—Android, iOS, Linux—with Cloud PCs streamed securely from the Microsoft Cloud.

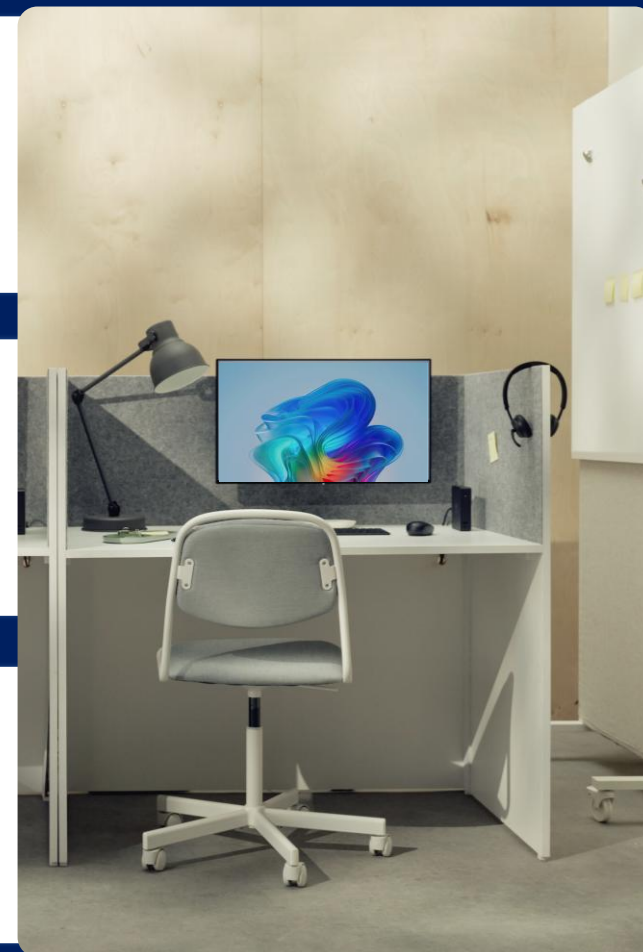

## Effortless productivity

With improved Windows search and Click to Do, quickly find and act on files, images, and data with AI-powered search and context-aware answers—no app switching, just streamlined workflows.

## Enterprise-grade security

All data remains within your trusted Cloud PC environment, honoring regional compliance boundaries, such as EU Data Boundary (EUDB). IT admins retain full control over enabling AI features for specific users.

## External identity support

- Now generally available
- Allows you to assign Windows 365 or Azure Virtual Desktop (single session) machines for external identities or guest accounts
- Allows 3<sup>rd</sup> party access to your environment without maintaining shadow accounts

# Windows 365 Link

# Windows 365 Link updates

- First purpose built device for Cloud PC access
- Availability expanding to Finland around February 2026
- Ignite updates:
  - Company branding
  - Bare-metal recovery
  - Authentication enhancements etc.

# Azure Virtual Desktop for hybrid environments

- Azure Virtual Desktop for hybrid environments provides an additional alternative for cost-effective on-premises virtual desktop infrastructure (VDI) based on Azure Arc.

## Today

### Azure Virtual Desktop for Azure Local

#### Customer value

- Enables Azure Virtual Desktop support for high-latency scenarios
- Support data residency, or application constraints that require on-premises VDI.

## Coming soon

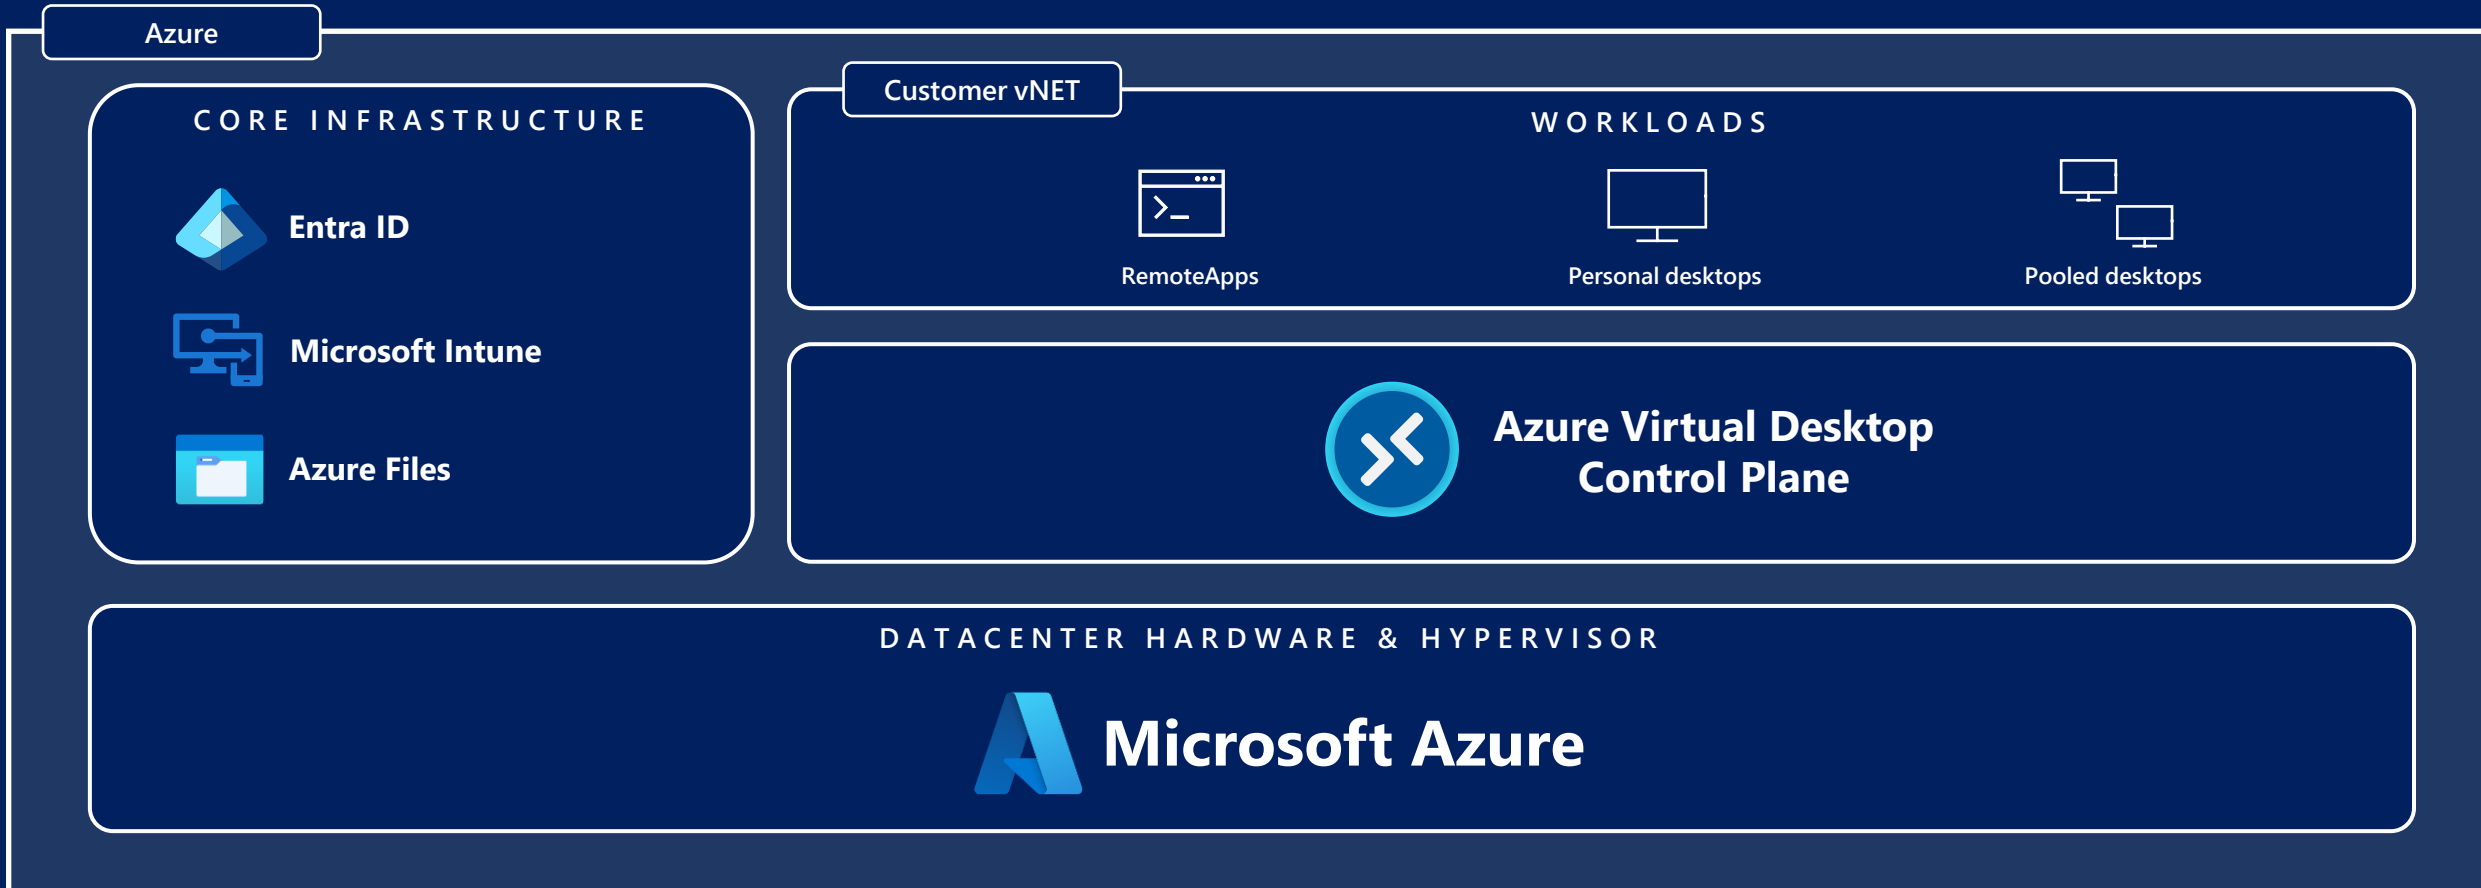

### Azure Virtual Desktop for hybrid environments

#### Customer value

- Provides a rich Azure Virtual Desktop experience without requiring new hardware purchases or hypervisor changes
- Works with Partner solutions to add additional VDI management capability
- Simplifies the path for cloud migration
