Miksi AP Preparation?

- Laitteiden rekisteröinti helpottuu – ei device hashia
- Nopeampi ja yksinkertaisempi (assigned group instead of dynamic)
- Parempi hallinta (staattiset ryhmät - yksinkertaista)
- Parempi raportointi esim. vianselvitykseen
- Valtiot, Puolustusvoimat voi käyttää nyt myös Autopilottia
- Microsoftin suositus – jos self-deploy ja pre-provisioning ei ole nyt tarpeellista ota uusi käyttöön jo Dev Prep koska uusi suunta on tämä
- APv2 on uusi tie, “tulevaisuus”

APv2 puutteet

- Enrollment prosessi vapaaehtoinen, käyttäjän noidettava ohjeita
 - APv1 ja APv2 ero
- OOBЕ kuluttajakysely tulee lopussa (esim telemetria)
- Ei Self-Deployment, Ei Pre-Provision
- Ei hostname nimeämispolitiikkaa
- Ei pätkää Windowsia
- Ei tue GroupTagejä = vain yksi Autopilot Profiili käytössä
- Tukee vain Platform Scripteja (ei remediationeita)
 - Win32 app skriptit apuna

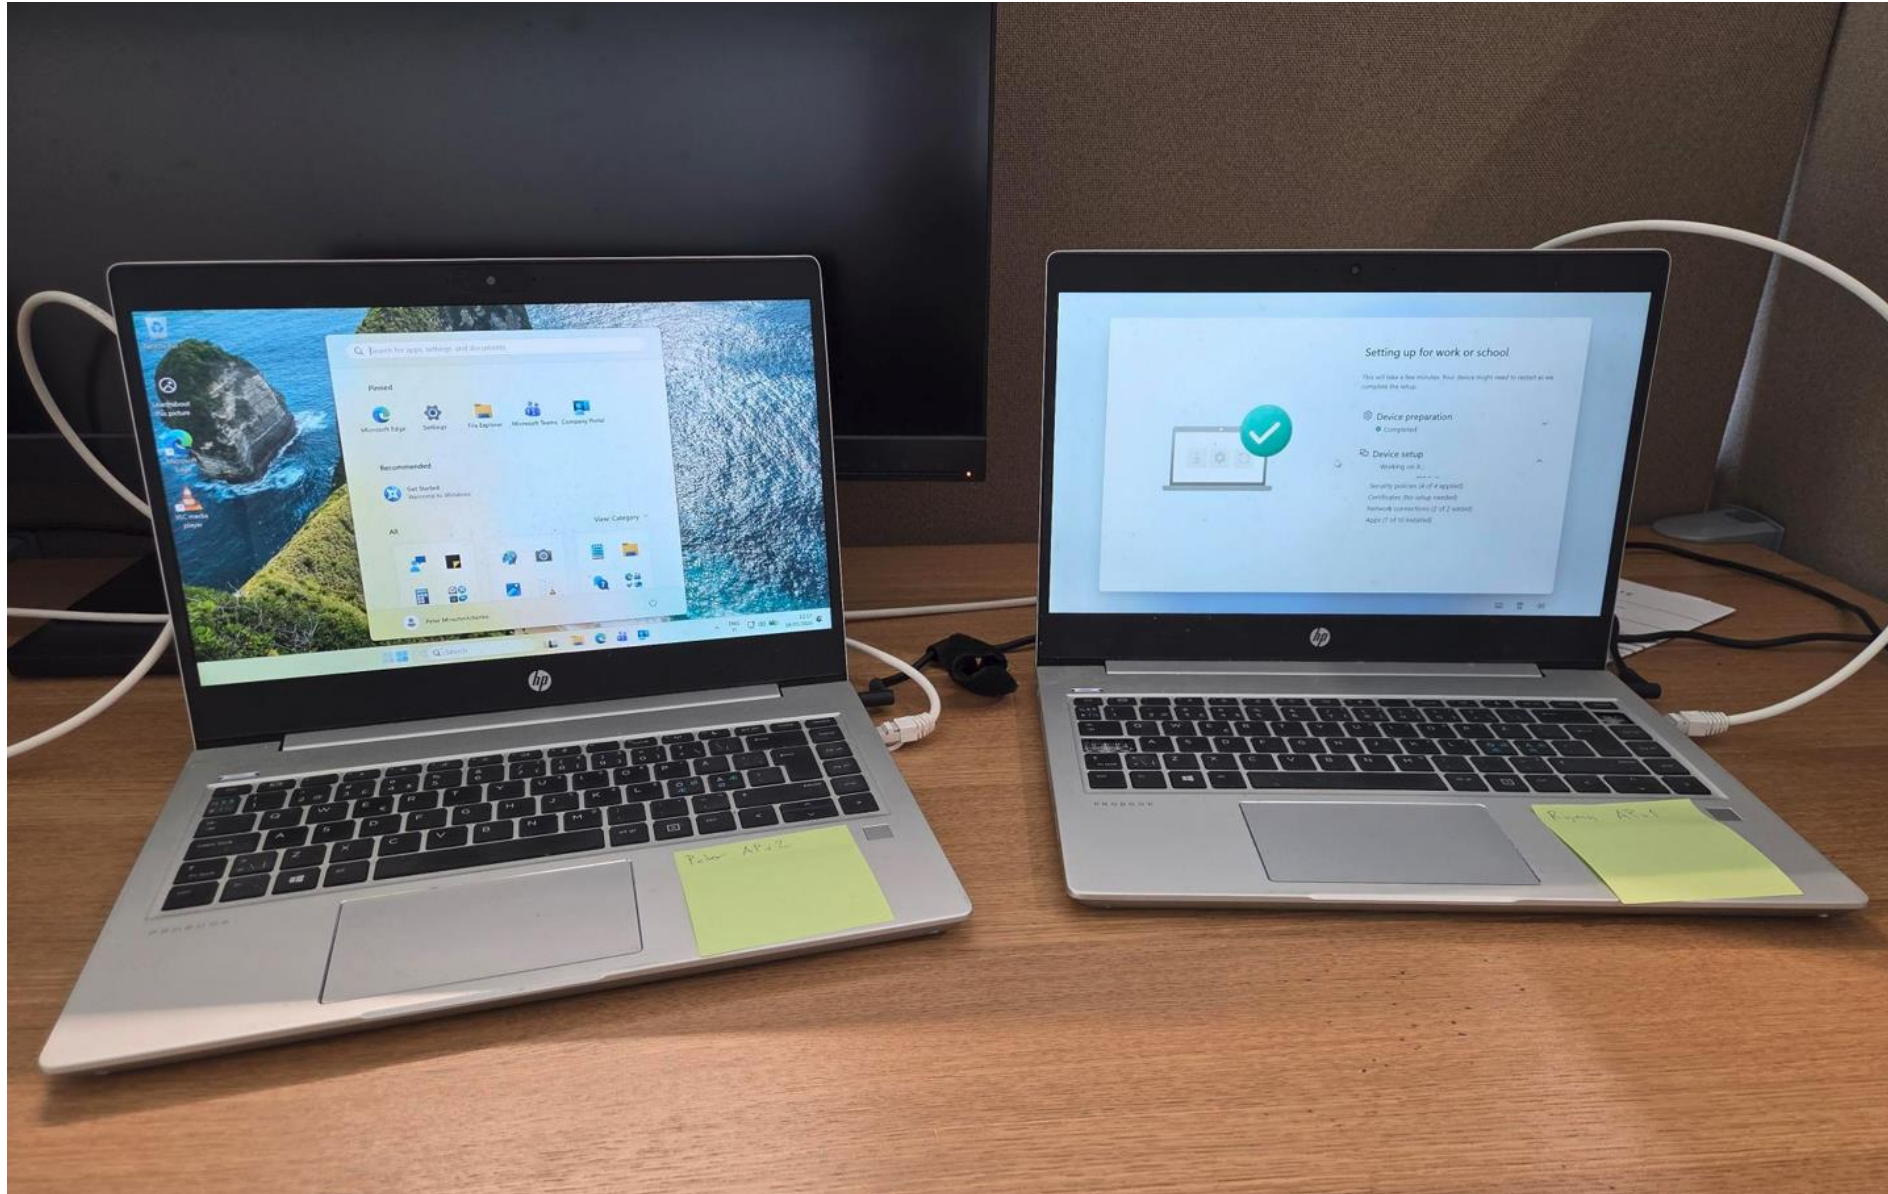

APv2 plussat

- Kestää restarttia
- Personal Device Enrollment Deny + Corporate identifiers toimii = Sarjanumero riittää
- Ei Hybrid Joinia
- Toimii rinnakkain perinteisen Autopilot Profiilin kanssa
- Win32+LOB
- Staattinen Assignment! (“Enrollment Time Grouping”)

Nopeustesti

Ryhmät ja objektit

- DEMO, miten APv1 ja APv2 sijoittuu samaan aikaan

APv2 vianratkaisut

- `Get-WindowsAutopilotDiagnosticsCommunity.ps1` toimii tässäkin
- Jos ohittaa koko % status ikkunan, niin käyttäjä ei ole assignattu APv2 ryhmään.
- Asennus keskeytyy ~5% kohdalla

Viimeisiä uutisia

- Order installation kyvykkyyttä ei ole tulossa kuten TS oli
- Tulossa (NDA)
